

TWA001 PORTABLE WASH BAY

PROCESS:

Wash down a vehicle on the wash mat. As water collects on the wash mat the automatic wash bay pump will pump water off the mat to a holding tank. As the level in the tank rises it activates the float switch which activates the pump feed to the separator which gravity feeds to the sewer. The separator pump controller has 2 x floats, 1 for activating the pump as mentioned above and the other acts as a high level alarm indicating a flashing strobe to signal the level in the tank it reaching a high level and to investigate.

SPECIFICATIONS

Dimensions:	4M x 6M (Standard size vehicle)
Material:	PVC or HD PVC
Bunded Perimeter:	Premium quality foam edge profile
Spray Curtains:	x 2
Fabricated Ramps:	x 2
Oil Water Separator:	TW1000 Oil Water Separator

PUMP SPECIFICATIONS

Power:	12V
Base Plate:	Stainless Steel
Automation:	Automatic float switch
Cable Length:	3M
